

# AQUAGOLD® fine touch™

The patented applicator with 24-karat gold-coated microneedles was the first of its kind in the world to receive FDA clearance.

This is a revolutionary, non-invasive, and painless treatment that offers a modern alternative to traditional needle mesotherapy.

The applicator delivers a customized cocktail directly into the dermis, stimulating the skin and providing visible hydration and radiance.

## Benefits

- Skin appears visibly hydrated and luminous, while minor imperfections are noticeably reduced.
- Treatment areas include the face, neck, décolleté, and the upper part of the hands.
- Painless delivery method.
- Direct administration of a personalized cocktail into the dermis.
- No downtime; the final effect can be enjoyed as early as the next day.

## Features

- Sterile, single-use product.
- 0.6 mm microneedles coated with 24-karat gold (99.9% pure gold).
- Microneedle diameter of 0.13 mm, thinner than a human hair.
- Class I medical microchannel applicator registered with the FDA.
- CE-certified medical device.

## Ideal Complement to Treatments Such As

- Hyaluronic acid injections
- Botulinum toxin injections
- Injectable poly-L-lactic acid
- Laser treatments

## Technology

The unique applicator design allows a personalized active cocktail to be delivered to the upper layers of the skin through micro-punctures.

The patented technology helps avoid side effects such as bruising and hematomas. Any redness visible after treatment usually lasts only 15-20 minutes, and in some patients it does not appear at all.

The patented microneedle design enables the treatment to be performed effectively and consistently.
